Doxense announces the release of Watchdoc® V5.3

DOXENSE, publisher of Watchdoc® and Focalist®, specialized solutions in the field of print management and optimization recently announced its alliance with SAGES INFORMATIQUE, publisher of Zeendoc®, cloud solution for document management, process automation and dematerialization, which will ultimately make the new group created, an editor proposing a rich palette of ever more innovative software's.

On September 17th, Doxense announces the release of Watchdoc® V5.3 with major innovations to meet the needs of its partners and customers.

Watchdoc®

*Keeping in mind that the main objectives of the Watchdoc® software is to assist those companies wishing to control their printing. Watchdoc® helps them control and reduce their printing costs, whilst also minimizing their impact on the environment. Thanks to Watchdoc®, there is usually a substantial level of savings (on average 20% on an expense item that can represent up to 6% of the annual turnover *) whilst increasing the quality of service to their users.*

Below, the main software innovations announced are:

1. The WESphone

WES (Watchdoc® Embedded Solutions), is the name commonly given to Watchdoc® interfaces directly embedded on the MFP screens.

Doxense announces the release of the WESphone, developed to allow users to go further in terms of mobile of printing: All their work can be printed on any type of network device regardless of its model, brand or its age.

Thus, bringing more flexibility, and mobility without them having to renew their equipment which is already in place.

The WESphone offers the Watchdoc® user the possibility of unlocking their print jobs, after having defined their properties, from their mobile phone or tablet. The fast and secure operation relies on identifying devices using a QR Code (or searching by name and identifier) and it leverages the full power of the Watchdoc® standard features for user identification and their print jobs.

This new WEB functionality is therefore accessible by all types of smartphone or tablet connected to the Internet and will adapt to different screen sizes. Its development is independent of IOS / Android, facilitating its next evolution.

Launching offer: the WESphone option is free in 2019!

New in the Watchdoc® 5.3 version and in line with our tag line “new ways to leave your mark” the WESphone expands the ways you can print!

2. The Savings Calculator

One of Doxense customers' main motivations for choosing Watchdoc® is its ability to generate substantial savings. Indeed, its reports and statistical reports are valuable analytical tools to help administrators optimize their resources related to printing and management control. Even the Purchasing departments may use it, so they can anticipate and monitor their budgets.

From now on, our customers will now be able to estimate the savings that they could achieve thanks to the application of a specific printing policy based on their existing data. This will be enough to apply tariffs and criteria of transformation of spools (simple print jobs) and to measure the gains they could potentially achieve.

Of course, the best printing policy will be one that saves money whilst providing a quality of service and availability of print media to the users. This simulator therefore makes it possible to make the judicious and efficient choices.

Just update your Watchdoc® license to benefit from this new feature for free!

3. The Report Communicator

For many years, Watchdoc® has been known for its advanced reporting capabilities.

At the request of its customers, Doxense integrates in this new version an automatic report communicator. It has never been easier to advise users about their print activity. The Report Communicator displays the report in an email so that the user can access the data directly without having to open an attached file, data including the details of the files printed last month, the type (monochrome or colour), the mode (simplex or duplex) as well as the economic and ecological impact for the company. And to make it even more appealing, the reports can be customized to your company colours.

Because regular communication contributes largely to the generation of savings. Doxense makes every effort to facilitate its implementation which is good for the company, and good for the planet.

Integrated within Watchdoc® 5.3, this new feature complements the WRS (Watchdoc® Reporting Services) option for reporting on print activity.

All you need to do is update your Watchdoc® license to receive it

Here at Doxense we always try to encourage Watchdoc® users to be even more eco-responsible!

4. New Website

Good communication with its customers and partners, also requires appropriate tools.

In addition to these product announcements, Doxense is pleased to present its new website accessible on the link www.doxense.com.

Complete and with everything you could need it gives you the access to detail all our various solutions, our Professional Services offer, as well as the latest news and recruitment offers.

It's also a way to access our Connect partner platform as well as the latest download links.

The ergonomics and graphics of the site have been completely redesigned to offer you an optimized navigation on any type of device.

We of course continue to listen to you, and all your comments are always welcome so that this site meets your expectations. So why not give us your live feedback on the Blog, participate in a User Club or submit to us any desired features for the future versions of Watchdoc®, Focalist® or Zeendoc®!

Regarding these announcements, Vincent LEMAIRE, Managing Director of Doxense declares:

"This announcement is part of the continuity: to offer the most operational functionalities so that our customers reach, even more quickly, their optimization objectives for their printing resources. Because security and mobility are at the heart of tomorrow's challenges, today's announcements are simple and easy to implement."

About Doxense

Present in Europe, the USA, China, the Middle East, Russia and Africa, Doxense is the publisher of dedicated printing solutions. This company, created in 2005, markets a software suite dedicated to the management of documents and printing.

Doxense's mission is to help its customers achieve their productivity and profitability goals by making the most of all printing, copying and scanning resources, in a context of increasing mobility.

Its solutions are independent of the manufacturer's equipment and can generate substantial savings, both in the private and public sector. They empower the user to be aware of the cost and the environmental impacts of his printouts. They also allow customers and partners to address the copiers and printers of all their customers and thus be able to remotely manage contracts, the installed base, the consumable levels, counters, alerts or the utilisation rate of each of the devices.

The major technological agreements signed with most manufacturers reinforce the reputation of Doxense, whose ease of installation and the ergonomics of the solutions are well appreciated.
