1. INTRODUCTION

What's new since version 5.2 of Watchdoc®? This is what you will discover in this document. The improvements and new features will make the version Watchdoc® mobile easier to use and more powerful in terms of data analysis. Enjoy the new discoveries!

2. THE WESPHONE

Allow your users to overcome the geographic constraints in terms of printing. Are you tempted?

It's possible thanks to the WESphone feature, web progressive application¹ which offers Watchdoc® user the possibility of unlocking their print jobs, after having defined their properties, from their mobile phone or tablet. The fast and secure operation relies on identifying devices using a QR Code (or searching by name and identifier) and it leverages the full power of the Watchdoc® standard features for user identification and their print jobs.

This new WEB functionality is therefore accessible by all types of smartphone or tablet connected to the Internet and will adapt to different screen sizes. Its development is independent of IOS / Android, facilitating its next evolution.

Launching offer: the WESphone option is free in 2019 !

New in the Watchdoc 5.3 version and in line with our tag line "new ways to leave your mark "the WESphone expands the ways you can print!

¹ A progressive web app is a web application that consists of pages or websites that can appear to the user in the same way as native applications or mobile applications. This type of application attempts to combine the features offered by most modern browsers with the benefits of the mobile 2.3 experience. A PWA looks like a regular website, from a secured URL but allows a user experience similar to that of a mobile application, without the constraints of the latter (submission to App Stores, significant use of the device memory, ...).

3. THE SAVINGS CALCULATOR

Who does not try to save money? This may be the main motivation that prompted you to choose Watchdoc®. Indeed, its reports and statistical reports are valuable analytical tools to help administrators optimize their resources related to printing and management. Even the Purchasing departments may use it buyers, so they can anticipate and monitor their budgets.

From now on, our customers will now able to estimate the savings that they could achieve thanks to the application of a specific printing policy based on their existing data. This will be enough to apply tariffs and criteria transformation of spools2 (simple print jobs) and to measure the gains they could potentially achieve.

Of course, the best printing policy will be one that saves money whilst providing a quality of service and availability of print media to the users. This simulator therefore makes it possible to make the judicious and efficient choices.

Just update your Watchdoc® license to benefit from this new feature for free!

Who does not dream of making even more savings?

The savings calculator

² The spool transformation feature is available on some brands of manufacturers partners, but not all.

4. THE REPORT COMMUNICATOR

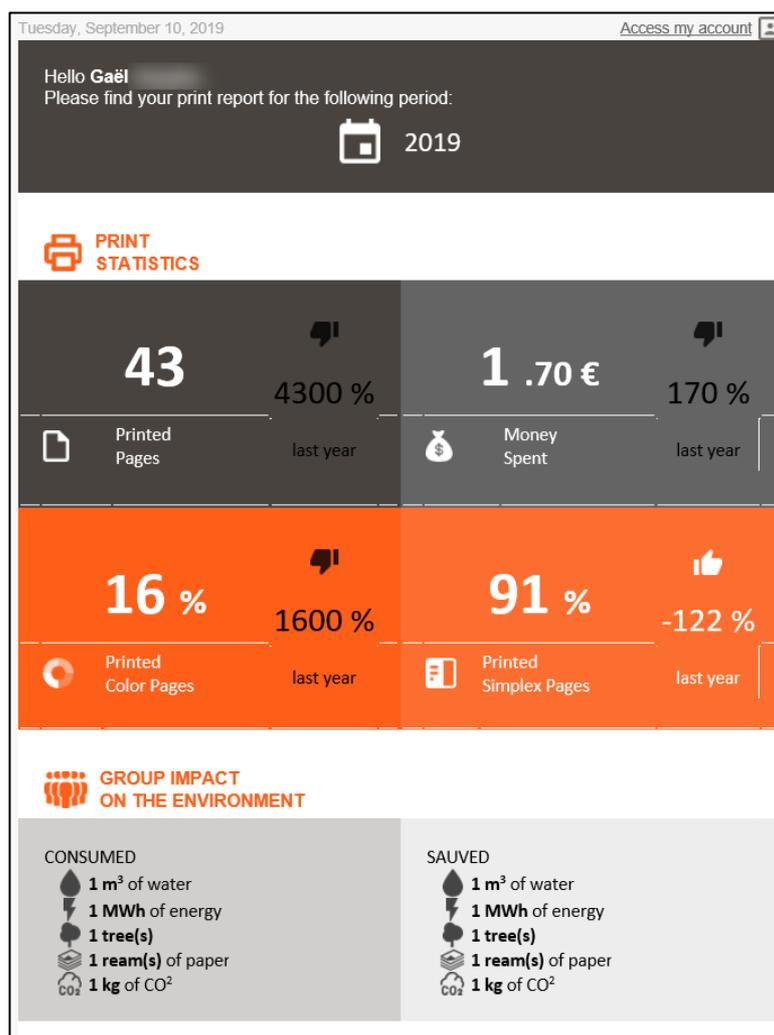

For many years, Watchdoc® has been known for its advanced reporting capabilities based on a specific development called WRS® (Watchdoc for Reporting Services) designed to send by email, at a pre-defined frequency, a .pdf file showing the printing consumption of the company with a group, devices, users orientation.

At the request of its customers, Doxense integrates in this new version an automatic report communicator. It has never been easier to advise users about their print activity.

Integrated within Watchdoc 5.3, this new feature complements the WRS (Watchdoc Reporting Services) option for reporting on print activity. The Report Communicator displays the report in an email so that the user can access its data directly without having to open an attached file, data including the details of the files printed last month, the type (monochrome or colour), the mode (simplex or duplex) as well as the economic and ecological impact for the company. And to make it even more appealing, the reports can be customized to your company colours.

All you need to do is update your Watchdoc® license to receive it.

Want to encourage all your users to be more eco-responsible!
